

## ABSTRACT

The present invention relates to a rapidly disintegrable tablet for oral administration, which disintegrates in the oral cavity within 60 seconds, consisting essentially of (i) a therapeutically effective amount of an active ingredient, (ii) spray-dried mannitol, of which at least 80% has an average particle size over 100  $\mu\text{m}$ , (iii) croscopovidone, and (iv) one or more pharmaceutically acceptable excipients, the tablet containing no microcrystalline cellulose.
